

Honeywell

UDC Calibration

Honeywell certifies that the your instrument meets or exceeds all published specifications (unless otherwise noted). It has been calibrated using standards whose accuracy's are traceable to the National Institute of Standards and Technology. Accuracy's have been derived from accepted values of natural physical constants, or have been derived by the ratio type of self-calibration techniques.

As shipped from the factory, your UDC controller should never have to be field calibrated to meet the controller's published specification.
