**SMARTFIT HEATING CONTROL SYSTEM IS
FURTHER ENHANCED WITH NEW REMOTE
SENSOR AND SETPOINT UNIT**

BRACKNELL, UK, 3 JUNE 2003 – A unit providing both remote temperature sensing and setpoint adjustment has been added to Honeywell Smartfit, the low voltage system now established as the new standard in home heating control. The Smartfit Remote Sensor/Setpoint Unit can be installed in the main living room, where it measures temperature and provides convenient setpoint adjustment using a familiar style of rotary knob. Meanwhile, the Smartfit Room Unit, which sets the switching times for space heating and hot water and also provides system diagnostics, is located in the most convenient position for the user –typically the kitchen or hallway.

The Room Unit controls the central heating using the temperature measured and set at the Remote Sensor/Setpoint Unit. Time programming and the hot water function both remain controlled from the Room Unit.

Smartfit with a Remote Sensor/Setpoint Unit provides clear advantages over conventional heating controls through ease and speed of electrical wiring when installing S or Y Plan systems with a room thermostat and timer. All Smartfit control connections carry a low voltage, so twin bell wire can be used. It does not matter which wire goes to which terminal. The wire from the Remote Sensor can be connected to either the Room Unit or Base Unit, or at any point along the wiring between the two.
